CC   hepatocellular carcinoma in a patient, involving detecting the level of
CC   expression of two or more genes represented in ABN93503-ABN97455 in a
CC   tissue sample. The method of the invention has hepatotropic, and
CC   cytostatic activity. The method is useful for diagnosing and detecting
CC   the progression of liver cancer, hepatocellular carcinoma and metastatic
CC   liver carcinoma in a patient. The method is useful for identifying
CC   expression profiles which serve as useful diagnostic markers as well as
CC   markers that can be used to monitor disease states, disease progression,
CC   drug toxicity, drug efficacy and drug metabolism. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT New recombinant nucleic acid encoding carcinoma associated protein,
PT useful for preparing compositions for treating carcinomas.
XX
PS Claim 1; SEQ ID NO 1568; 245pp; English.
XX
CC The invention relates to recombinant carcinoma associated (CA) nucleic
CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a biochip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC leukaemia) or a propensity to carcinoma by determination of the sequence
CC of a CA gene, or by determination of CA gene expression in particular
CC tissues. CA nucleic acids, proteins and antibodies are also useful as
CC therapeutic agents and in screening and evaluating drug candidates. The
CC present sequence represents a specifically claimed human CA nucleic acid
CC sequence of the invention. Note: The complete sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT   Novel recombinant carcinoma-associated nucleic acid, useful for
PT   evaluating the effect of a candidate carcinoma drug, and for diagnosing
PT   carcinoma.
XX
PS   Claim 1; Page 82-86; 229pp; English.
XX
CC   This invention relates to a novel recombinant carcinoma-associated (CA)
CC   nucleic acid comprising a fully defined genomic, mRNA or coding sequences
CC   of mouse Rorc gene or human RORC gene, mouse mCG15938 or human gene BAT1,
CC   mouse Iqgap1 gene or human IQGAP1 gene, mouse Zpf29 gene or human
CC   hCG27579 gene, mouse Kcnj9 gene or human KCNJ9 gene, mouse Ppp3cc gene or
CC   human PPP3CC gene, mouse mCG9110 gene or human hCG27579 gene, as given in
CC   the specification. CA genes are genes which are preferably expressed in
CC   cancer cells, preferably lymphatic, breast, prostate or epithelial cells.
CC   A compound which modifies the expression of the CA genes or bind to
CC   carcinoma-associated proteins (CAP) may have cytostatic activity and the
CC   sequences of the invention may enable the use of gene therapy or a
CC   development of an anticancer vaccine. Therefore the invention may be
CC   useful for diagnosis and treatment of carcinomas, especially lymphoma
CC   carcinoma, breast cancer and prostate cancer. The CA genes may also be
CC   useful as DNA vaccines and for generating animal models of carcinomas.
CC   The present sequence is that of the human IQGAP1 gene genomic DNA
CC   sequence of the invention.

PT   Diagnosing susceptibility to a stroke in an individual, comprises
PT   screening for an at-risk haplotype in the phosphodiesterase 4D gene.
XX
PS   Claim 5; SEQ ID NO 1; 417pp; English.
XX
CC   The invention relates to a method of diagnosing susceptibility to a
CC   stroke in an individual comprising screening for an at-risk haplotype in
CC   the phosphodiesterase 4D (PDE4D) gene that is more frequently present in
CC   an individual susceptible to stroke compared to a healthy individual,
CC   where the presence of the at-risk haplotype is indicative of a
CC   susceptibility to stroke and where the at-risk haplotype increases risk
CC   of stroke significantly. Polymorphisms in the phosphodiesterase 4D
CC   (PDE4D) gene are useful in diagnosing susceptibility to stroke in an
CC   individual, predicting the clinical course and treatment for stroke and
CC   monitoring the effectiveness of treatment. PDE4D nucleic acids,
CC   polypeptides or agents that alter the activity of the polypeptides are
CC   useful for treating or preventing stroke. This sequence represents human
CC   PDE4D genomic DNA of the invention. Note: The sequence data for this
CC   patent is also available in electronic format from USPTO at
CC   seqdata.uspto.gov/sequence.html.

PT Novel human cancer associated protein encoded within open reading frame
PT of cancer associated gene, useful as targets for diagnosing cancer.
XX
PS Claim 16; SEQ ID NO 10; 182pp; English.
XX
CC The invention relates to cancer-associated proteins (CAP) and the cancer-
CC associated (CA) nucleic acids encoding them. The invention also relates
CC to a method for treating cancers involving administering to a patient an
CC inhibitor of CAP, and a method of screening for anticancer activity in a
CC potential drug involving providing a cell that expresses a CA gene,
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC drug candidate and monitoring the effect of the anticancer drug candidate
CC on expression of the CA gene. The CAP proteins are useful for detecting
CC cancer associated with expression of a CAP protein in a test cell sample
CC and for screening for a bioactive agent capable of modulating the
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC cancer, involving determining the expression of a CA nucleic acid in a
CC tissue. This sequence represents a human CA gene of the invention. Note:
CC The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT Assessing or diagnosing susceptibility to stroke, comprises determining
PT phosphodiesterase 4D isoform expression levels in an individual compared
PT to control, a difference in isoform expression indicates susceptibility
PT to stroke.
XX
PS Example 1; SEQ ID NO 105; 521pp; English.
XX
CC The invention relates to a method of assessing susceptibility to stroke
CC in an individual by determining phosphodiesterase 4D (PDE4D) isoform
CC expression levels in the individual compared to control, where a
CC difference in isoform expression indicates susceptibility to stroke. The
CC method is useful for assessing susceptibility to stroke (claimed), for
CC predicting those at higher risk of developing a stroke, for specifically
CC identifying a rate-limiting pathway involved in stroke, for predicting an
CC individual's response to a particular drug, even drugs that do not act on
CC PDE4D or its pathway. Modulators of PDE4D isoform are useful for
CC preventing the occurrence of stroke in an individual. PDE4D polypeptides
CC are useful as molecular weight markers, to raise antibodies or to elicit
CC an immune response, or as markers for cells or tissues in which the
CC corresponding polypeptide is preferentially expressed during tissue
CC differentiation or in a diseased state. This sequence corresponds to the
CC PDE4D genomic sequence.

PT New carcinoma associated gene, useful for preparing a composition for
PT diagnosing or treating carcinoma.
XX
PS Claim 1; SEQ ID NO 16; 342pp; English.
XX
CC The invention relates to a new recombinant nucleic acid (from a CA,
CC carcinoma associated, gene) appearing as ADL27113-ADL27172. Also included
CC are a host cell comprising the recombinant nucleic acid or expression
CC vector, an expression vector comprising the recombinant nucleic acid, a
CC recombinant protein (a carcinoma associated protein) comprising the
CC sequence encoded by the nucleic acid, a method for screening drug
CC candidates, a method for screening for a bioactive agent capable of
CC binding to (or modulating the activity of) a carcinoma associated
CC protein, a method for evaluating the effect of a candidate carcinoma
CC drug, a method of diagnosing carcinoma, a method for inhibiting the
CC activity of a carcinoma associated protein, a method of treating
CC carcinomas, a method of neutralising the effect of a carcinoma associated
CC protein, a biochip comprising one or more nucleic acid segments of the
CC nucleic acid, a method of diagnosing carcinoma or propensity to carcinoma
CC and a method of determining carcinoma associated gene copy number. The
CC nucleic acid is useful for preparing a composition for diagnosing or
CC treating carcinoma especially lymphomas. The present sequence is the
CC genomic sequence from a human carcinoma associated gene.

XX
PT   Early detection of soft tissue sarcoma comprises determining expression
PT   of a gene in a first soft tissue sample and a normal soft tissue sample
PT   and comparing the gene expression, also useful in treating soft tissue
PT   sarcoma.
XX
PS   Example 2; SEQ ID NO 3281; 210pp; English.
XX
CC   The invention relates to a novel method for detecting soft tissue sarcoma
CC   which comprises obtaining a first soft tissue sample from an individual
CC   and a normal soft tissue sample from the same or different individual,
CC   determining the expression of a gene in both samples and comparing the
CC   expression of the gene in both soft tissue samples, where a higher level
CC   of protein expression in the first soft tissue sample indicates the
CC   presence of soft tissue sarcoma. The method of the invention has
CC   cytostatic applications and may be useful for detecting soft tissue
CC   sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC   acid sequences may be useful in diagnostic and screening applications.
CC   The current sequence is that of a human soft tissue sarcoma-upregulated
CC   DNA of the invention. The current sequence is not shown within the
CC   specification per se but was submitted in CD format by the inventor.

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 298; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT   Determining susceptibility of an individual to joint space narrowing,
PT   osteophyte development and/or joint pain comprises identifying whether
PT   the individual has at least one polymorphism in a polynucleotide encoding
PT   a protein.
XX
PS   Disclosure; SEQ ID NO 436; 297pp; English.
XX
CC   The invention relates to a method of determining susceptibility of an
CC   individual to joint space narrowing and/or osteophyte development and/or
CC   joint pain comprising identifying whether the individual has at least one
CC   polymorphism in a polynucleotide encoding at least one of the protein
CC   listed in the specification. The methods, composition and agent are
CC   useful for modulating the susceptibility of an individual to joint space
CC   narrowing and/or osteophyte development and/or joint pain that is
CC   associated with a disease, preferably osteoarthritis. The cell line and
CC   the non-human animal are useful for screening for an agent for diagnosing
CC   an individual having susceptibility to joint space narrowing and/or
CC   osteophyte development and/or joint pain. This sequence corresponds to
CC   the polynucleotide encoding a protein listed in the specification. (Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences).

PT   Novel genomic sequences used for treating human diseases and disorders.
XX
PS   Disclosure; Fig 6; 58pp; English.
XX
CC   The present DNA sequence is the first targeting sequence that corresponds
CC   to nucleotides 1470-4723 of the human genomic sequence from a region
CC   upstream of the transcription start site of granulocyte colony-
CC   stimulating factor (G-CSF). A DNA construct comprising this targeting
CC   sequence is cloned into the plasmid pGG13, upstream of a CMV promoter and
CC   neomycin resistance gene, that functions as the transcriptional
CC   regulatory sequence and as selectable marker respectively. Homologous
CC   recombination of this construct into the host cells, can be used to
CC   modify the expression of G-CSF. These recombinant cells which express G-
CC   CSF are useful for in vitro production of the protein and gene therapy.
CC   Such cells may also be used in a delivery system for stimulating the
CC   proliferation and differentiation of haematopoietic progenitor cells, or
CC   for other conditions that can be treated with G-CSF, like chemotherapy-
CC   induced neutropenia, to treat patients undergoing bone marrow
CC   transplantation, chronic idiopathic and congenital neutropenic disorders

XX
CC   The present DNA sequence is the human genomic sequence from a region
CC   upstream of the transcription start site of granulocyte colony-
CC   stimulating factor (G-CSF). This sequence represents nucleotides -6578 to
CC   -364 relative to the translation start site. G-CSF gene contains five
CC   exons and four introns. A DNA construct comprising a targeting sequence
CC   homologous to the 5'non-coding sequence of G-CSF, a transcriptional
CC   regulatory sequence that differs from the endogenous G-CSF gene, and a
CC   selectable marker gene for selection of recombinant cells is generated.
CC   It can be used by homologous recombination to modify the expression of
CC   endogenous G-CSF. These recombinant cells which express G-CSF are useful
CC   for in vitro production of the protein and gene therapy. Such cells may
CC   also be used in a delivery system for stimulating the proliferation and
CC   differentiation of hematopoietic progenitor cells, or for other
CC   conditions that can be treated with G-CSF, like chemotherapy-induced
CC   neutropenia, to treat patients undergoing bone marrow transplantation,
CC   chronic idiopathic and congenital neutropenic disorders

PT   Complex or composition comprising a double stranded DNA sequence, a
PT   homologous recombination-enhancing agent, and agent inhibiting non-
PT   homologous end joining, for promoting alteration of a target sequence in
PT   a cell.
XX
PS   Disclosure; Page 77-79; 82pp; English.
XX
CC   The invention relates to a complex for promoting alteration of a target
CC   sequence in a cell, comprising a double stranded DNA sequence, a
CC   homologous recombination-enhancing agent and an agent inhibiting non-
CC   homologous end joining. The invention is used in gene therapy. The
CC   complex is useful for promoting an alteration at a selected site of a
CC   target sequence of a cell preferably of fungal, plant or animal origin,
CC   or of vertebrate origin which is a primary or secondary mammalian (human)
```

CC cell or an immortalised mammalian (human) cell, where target sequence
CC comprises a mutation preferably point mutation having less than 10 base
CC pairs which differ from wild-type sequence, (selected from cystic
CC fibrosis transmembrane regulator (CFTR) gene having mutation changes in
CC an amino acid encoded by codon 508, beta-globin gene having mutation
CC changes in an amino acid encoded by codon 6, Factor VIII gene having
CC mutation changes in an amino acid encoded by codon 2209 or 2229, Factor
CC IX gene, von Willebrand factor gene or xeroderma pigmentosa group G gene)
CC ; and the DNA sequence comprises a wild-type sequence which can correct
CC the mutation. The method further comprises introducing an agent which
CC inhibits a mismatch-repair protein (expression), which is from Msh2,
CC Msh6, Msh3, M1h1 and PMS2, or is an anti-mismatch-repair protein antibody
CC covalently linked to the DNA sequence, or to Rad52 protein or its
CC fragment. The complex is useful for altering expression of a protein
CC coding sequence of a gene in a cell. The method comprises introducing the
CC complex into the cell, where the DNA sequence comprises a regulatory
CC sequence, maintaining the cell under conditions which permit alteration
CC of a targetted genomic sequence to produce a homologously recombinant
CC cell and maintaining the homologously recombinant cell under conditions
CC which permit expression of the protein coding sequence of the gene under
CC control of the regulatory sequence. Homologously recombinant cell is
CC useful as a vehicle or delivery system for therapeutic proteins, such as
CC enzymes, hormones, cytokines, antigens, antibodies, clotting factors,
CC anti-sense RNA, regulatory proteins, transcription proteins, receptors,
CC structural proteins, novel (non-optimised) proteins and nucleic acid
CC products and engineered DNA and for supplying a therapeutic protein,
CC including erythropoietin, calcitonin, growth hormone, insulin and
CC insulinotropin. The present sequence is human granulocyte colony
CC stimulating factor (huGCSF) fragment used in the invention

PT   New polynucleotides and polypeptides, useful for developing a diagnostic
PT   marker or medicines for regulation of their expression and activity, or
PT   as targets of gene therapy.
XX
PS   Claim 1; Page; 222pp; English.
XX
CC   The invention discloses a polynucleotide comprising a sequence selected
CC   from 1970 fully defined nucleotide sequences which encode novel
CC   polypeptides. Also claimed is a polypeptide encoded by the polynucleotide
CC   or its partial peptide, an antibody binding to the polypeptide or peptide
CC   of the polynucleotide, immunologically assaying the polypeptide or
CC   peptide of the polynucleotide by contacting the polypeptide or peptide
CC   with the antibody of the encoded protein, and observing the binding
CC   between the two, a transformant carrying the polynucleotide in an
CC   expressible manner and an antisense polynucleotide. The oligonucleotide
CC   is useful as a primer for synthesising the polynucleotide, or as a probe
CC   for detecting the polynucleotide. The polynucleotides and encoded
CC   proteins are useful as pharmaceutical agents and many disease-related
CC   genes may be included in them, for developing a diagnostic marker or
CC   medicines for regulation of their expression and activity, or as targets
CC   of gene therapy. The genes are involved in tissue and/or cell
CC   regeneration. Membrane proteins, signal transduction-related proteins,
CC   transcription-related proteins, disease-related proteins and genes
CC   encoding them can be used as indicators for diseases (e.g. osteoporosis,
CC   neurological diseases, cancer, tumours. The cDNA may be used to regulate
CC   the activity or expression of the encoded protein to treat diseases. The
CC   sequence presented is a cDNA of the invention. Note: Some of the sequence
CC   data for this patent is not represented in the printed specification, but
CC   is based on sequence information supplied by the European Patent Office.

PT   New human secreted proteins and nucleic acids, useful for detecting or
PT   treating cancer or other hyperproliferative disorders, autoimmune
PT   disorders, inflammatory disorders, HIV disease, hepatitis or anemia.
XX
PS   Disclosure; Page 1963-1970; 2474pp; English.
XX
CC   ABZ73281-ABZ73697 represent cDNAs corresponding to 391 human secreted
CC   protein genes, and ABP00947-ABP01363 represent the proteins they encode.
CC   ABZ73698-ABZ74687 represent human secreted protein genomic fragments. The
CC   invention also encompasses antibodies specific for the secreted proteins,
CC   the use of the secreted proteins in drug screening and recombinant
CC   vectors and host cells comprising a nucleic acid of the invention. The
CC   secreted proteins are thought to be involved in biological activities
CC   associated with cellular signalling, cellular differentiation, cell
CC   migration, prohormone activation and neurotransmitter activity. The
CC   secreted proteins, nucleic acids encoding them, antibodies or antibody
CC   fragments specific for the secreted proteins, and modulators of protein
CC   activity are useful for diagnosing or treating cancers or other
CC   hyperproliferative disorders. Additionally, the secreted proteins and
CC   their nucleic acids may also be used in the treatment of autoimmune
CC   disorders, inflammatory disorders, diseases involving angiogenesis, AIDS
CC   (acquired immunodeficiency syndrome), hepatitis, anaemia, and to promote
CC   wound healing. Nucleic acids of the invention may be used for chromosome
CC   identification, chromosome mapping, in gene therapy, for identifying
CC   individuals from minute biological samples, as hybridisation probes, and
CC   as molecular weight markers. The present sequence represents a human
CC   secreted protein genomic fragment referred to in the disclosure of the
CC   invention

CC   The invention comprises the amino acid and coding sequence of human
CC   secreted proteins. The DNA and protein sequences of the invention are
CC   useful in the treatment of cardiovascular disorders, such as: arrhythmia,
CC   atherosclerosis, stroke, endocarditis, congestive heart failure,
CC   rheumatic heart disease, cardiomyopathy, hemorrhoids, varicose veins,
CC   migraine, or thrombosis. The DNA and protein sequences may also be used
CC   for treating or preventing: neural disorders, immune system disorders,
CC   muscular disorders, reproductive disorders, gastrointestinal disorders,
CC   pulmonary disorders, renal disorders, proliferative disorders and/or
CC   cancerous diseases. The present DNA sequence is used in the
CC   exemplification of the invention. NOTE: The present sequence is shown on
CC   the WIPO website.

PS Disclosure; Page 1946-1953; 2423pp; English.
XX
CC The invention relates to novel human genes (ABZ66891-ABZ68209) and the
CC encoded secreted proteins (ABP99470-ABP99872) useful for preventing,
CC treating or ameliorating medical conditions e.g. by protein or gene
CC therapy. The genes are isolated from a range of human tissues disclosed
CC in the specification. The nucleic acids, proteins, antibodies and
CC (ant)agonists are useful in the diagnosis, treatment and prevention of:
CC (a) cancer, e.g. breast and ovarian cancer and other cancers of the
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC lung or urogenital; (b) immune disorders e.g. Addison's disease,
CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC bacterial, fungal and parasitic infections

XX
PT   Isolated nucleic acid molecule encoding a reproductive system antigen is
PT   used in preventing, treating or ameliorating a medical condition.
XX
PS   Disclosure; SEQ ID NO 8770; 1297pp + Sequence Listing; English.
XX
CC   The present invention provides the protein and coding sequences of a
CC   number of human reproductive system related antigens. These can be used
CC   in the prevention and treatment of reproductive system disorders,
CC   including cancer. The present sequence is a genomic sequence encoding a
CC   protein of the invention

XX
CC The present invention provides the protein and coding sequences of 973
CC human testicular antigens, and fragments of their genomic sequences. The
CC sequences can be used in the treatment of cardiovascular, urinary system,
CC reproductive system, immune, respiratory, neurological and
CC gastrointestinal disorders, infections, and particularly cancer,
CC especially testicular cancers. The present sequence is a DNA encoding a
CC protein fragment of the invention

XX
CC ABZ73281-ABZ73697 represent cDNAs corresponding to 391 human secreted
CC protein genes, and ABP00947-ABP01363 represent the proteins they encode.
CC ABZ73698-ABZ74687 represent human secreted protein genomic fragments. The
CC invention also encompasses antibodies specific for the secreted proteins,
CC the use of the secreted proteins in drug screening and recombinant
CC vectors and host cells comprising a nucleic acid of the invention. The
CC secreted proteins are thought to be involved in biological activities
CC associated with cellular signalling, cellular differentiation, cell
CC migration, prohormone activation and neurotransmitter activity. The
CC secreted proteins, nucleic acids encoding them, antibodies or antibody
CC fragments specific for the secreted proteins, and modulators of protein
CC activity are useful for diagnosing or treating cancers or other
CC hyperproliferative disorders. Additionally, the secreted proteins and
CC their nucleic acids may also be used in the treatment of autoimmune
CC disorders, inflammatory disorders, diseases involving angiogenesis, AIDS
CC (acquired immunodeficiency syndrome), hepatitis, anaemia, and to promote
CC wound healing. Nucleic acids of the invention may be used for chromosome
CC identification, chromosome mapping, in gene therapy, for identifying
CC individuals from minute biological samples, as hybridisation probes, and
CC as molecular weight markers. The present sequence represents a human
CC secreted protein genomic fragment referred to in the disclosure of the
CC invention

PT   disorders (e.g. arrhythmia, atherosclerosis, cardiomyopathy, or
PT   thrombosis).
XX
PS   Disclosure; SEQ ID NO 829; 1572pp; English.
XX
CC   The invention comprises the amino acid and coding sequence of human
CC   secreted proteins. The DNA and protein sequences of the invention are
CC   useful in the treatment of cardiovascular disorders, such as: arrhythmia,
CC   atherosclerosis, stroke, endocarditis, congestive heart failure,
CC   rheumatic heart disease, cardiomyopathy, hemorrhoids, varicose veins,
CC   migraine, or thrombosis. The DNA and protein sequences may also be used
CC   for treating or preventing: neural disorders, immune system disorders,
CC   muscular disorders, reproductive disorders, gastrointestinal disorders,
CC   pulmonary disorders, renal disorders, proliferative disorders and/or
CC   cancerous diseases. The present DNA sequence is used in the
CC   exemplification of the invention. NOTE: The present sequence is shown on
CC   the WIPO website.

XX
PT   New human secreted proteins encoded by genes contained in cDNA clones
PT   (e.g. HGCAC19), useful for preventing, treating or diagnosing e.g. AIDS,
PT   multiple sclerosis, herpes virus, leukemia, tick-borne encephalitis or
PT   West Nile fever.
XX
PS   Disclosure; Page 1953-1963; 2423pp; English.
XX
CC   The invention relates to novel human genes (ABZ66891-ABZ68209) and the
CC   encoded secreted proteins (ABP99470-ABP99872) useful for preventing,
CC   treating or ameliorating medical conditions e.g. by protein or gene
```

```
CC   therapy. The genes are isolated from a range of human tissues disclosed
CC   in the specification. The nucleic acids, proteins, antibodies and
CC   (ant)agonists are useful in the diagnosis, treatment and prevention of:
CC   (a) cancer, e.g. breast and ovarian cancer and other cancers of the
CC   adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC   lung or urogenital; (b) immune disorders e.g. Addison's disease,
CC   allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC   diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC   arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC   myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
CC   cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC   bacterial, fungal and parasitic infections

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

; Patent No. 6812339
; GENERAL INFORMATION:
;  APPLICANT: VENTER, J. Craig et al.
;  TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
;  TITLE OF INVENTION:  WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
;  FILE REFERENCE: CL001307
;  CURRENT APPLICATION NUMBER: US/09/949,016
;  CURRENT FILING DATE:  2000-04-14
;  PRIOR APPLICATION NUMBER: 60/241,755
;  PRIOR FILING DATE: 2000-10-20
;  PRIOR APPLICATION NUMBER: 60/237,768
```

```
;  PRIOR FILING DATE: 2000-10-03
;  PRIOR APPLICATION NUMBER: 60/231,498
;  PRIOR FILING DATE: 2000-09-08
;  NUMBER OF SEQ ID NOS: 207012
;  SOFTWARE: FastSEQ for Windows Version 4.0
; SEQ ID NO 11817
;   LENGTH: 124700
;   TYPE: DNA
;   ORGANISM: Human
US-09-949-016-11817

  Query Match             18.0%;  Score 359.8;  DB 3;  Length 124700;
  Best Local Similarity   80.4%;  Pred. No. 3.4e-84;
  Matches  469;  Conservative    0;  Mismatches   87;  Indels   27;  Gaps    3;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            4987.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DI064BB02QP1&c=4987.r.

            RNA prepared and library constructed by W. Walter Lorenz (School of
            Forest Resources, University of Georgia); plant material prepared
            by Craig Zimmermann (School of Forest Resources, University of
            Georgia) using rooted cuttings provided by the Forest Biology
            Research Cooperative (FBRC) and the CCLONES project a the
            University of Florida; sequencing done in the Laboratory for
            Genomics and Bioinformatics, University of Georgia. Sequence ends
            have been trimmed to exclude vector and regions below Phred quality
            16. Three-prime sequences are presented as their reverse complement
            and have been trimmed to exclude polyA.
            Seq primer: JENREV (CAGGAAACAGCTATGACC).

                      /clone_lib="Roots, dark"
                      /note="Organ: Root; Vector: pSL1180; Site_1: EcoRI;
                      Site_2: XhoI; The library was prepared from polyA+ RNA
                      from the roots of 1-year-old loblolly pine (Pinus taeda)
                      cuttings that were rooted and then planted in washed sand.
                      The rooted cuttings were maintained for 50 days (May 1
                      2003 harvest) under ambient conditions in a local
                      greenhouse. They were kept on a weekly regimen of 0.5x
                      nutrient-complete Hoagland's solution and supplemented
                      with additional water sufficient to maintain a 15% soil
                      moisture content. Twenty-four hours (24h) prior to
                      harvesting roots for mRNA preparation, the potted trees
                      were placed in a dark growth chamber at 25 C.
                      Double-stranded cDNA was cloned unidirectionally into
                      pSL1180. Inserts can be excised with EcoRI (5' end) and
                      XhoI (3' end)."

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

LOCUS       AL355530               196934 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP11-338L11 on chromosome 10 Contains
            the 5' end of the gene for novel gene (KIAA0534) and a CpG island,
            complete sequence.
ACCESSION   AL355530
VERSION     AL355530.6  GI:8894326
KEYWORDS    HTG; KIAA0534.
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jul 1, 2000 this sequence version replaced gi:8670617.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 10, constructed by the Sanger Centre Chromosome 10
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr10
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            RP11-338L11 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6.

RESULT 5
AX033939
LOCUS AX033939 39238 bp DNA linear PAT 21-SEP-2000
DEFINITION Sequence 31 from Patent WO9851790.
ACCESSION AX033939
VERSION AX033939.1 GI:10280508
KEYWORDS .
SOURCE unidentified
ORGANISM unidentified
unclassified sequences.
REFERENCE 1
AUTHORS Cancilla,M.R., Choo,K.H. and Du,S.D.
TITLE A novel nucleic acid molecule
JOURNAL Patent: WO 9851790-A 31 19-NOV-1998;
CANCILLA MICHAEL ROBERT (AU) ; CHOO KONG HONG ANDY (AU) ; SART
DESIREE DU (AU) ; AMRAD OPERATIONS PTY LTD (AU)

AF042484
LOCUS       AF042484               80155 bp    DNA     linear   PRI 22-JUN-2000
DEFINITION  Homo sapiens sequence of the 80 kb core centromere protein binding
            region of the mar del(10) neocentromere corresponding to human
            chromosome 10q25.2, complete sequence.
ACCESSION   AF042484
VERSION     AF042484.1  GI:4205782
KEYWORDS    HTG.
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
            Hominidae; Homo.

TITLE Direct Submission

JOURNAL Submitted (12-OCT-2000) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA

COMMENT On Mar 25, 2001 this sequence version replaced gi:10799449.
All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997)

---------- Project Information
Center project name: L11327
Center clone name: 314_C_19
----------.
* NOTE: This record contains 85 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
* 1 720: contig of 720 bp in length
* 721 820: gap of 100 bp
* 821 1557: contig of 737 bp in length
* 1558 1657: gap of 100 bp
* 1658 2404: contig of 747 bp in length
* 2405 2504: gap of 100 bp

  TITLE     Direct Submission
  JOURNAL   Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Jun 26, 2005 this sequence version replaced gi:58038134.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: FABV
                Center clone name: CH240-2L12
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 214934 bases at least Q40
                Consensus quality: 217760 bases at least Q30
                Consensus quality: 220382 bases at least Q20
                Estimated insert size: 219583; sum-of-contigs estimation
                Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 30 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3527: contig of 3527 bp in length

AUTHORS	Wilson,R.
TITLE	Direct Submission
JOURNAL	Submitted (01-JAN-2004) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
COMMENT	On Nov 15, 2003 this sequence version replaced gi:27413228. ---------- Genome Center Center: Washington University Genome Sequencing Center Center code: WUGSC Web site: http://genome.wustl.edu Contact: submissions@watson.wustl.edu ---------- Summary Statistics Center project name: M_BA0376L04 ----------. NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateno in the laboratory of Pieter de Jong (http://www.chori.org) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 15, 2002 this sequence version replaced gi:22856031.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GZCK
                Center clone name: CH230-523J8
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 206828 bases at least Q40
                Consensus quality: 209779 bases at least Q30
                Consensus quality: 211515 bases at least Q20
                Estimated insert size: 210430; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   137365: contig of 137365 bp in length
            *  137366   137465: gap of unknown length
            *  137466   237778: contig of 100313 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jul 1, 2000 this sequence version replaced gi:8546598.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 13, constructed by the Sanger Centre Chromosome 13
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr13
            RP11-40A8 is from the library RPCI-11.1 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

            Insert size: 167000; agarose-fp
            Insert size: 162854; sum-of-contigs
            Quality coverage: 5.3 in Q20 bases; agarose-fp
            Quality coverage: 5.4 in Q20 bases; sum-of-contigs
          ----------.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 8 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *        1     1174: contig of 1174 bp in length
          *     1175     1274: gap of 100 bp
          *     1275     4788: contig of 3514 bp in length

            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:
            http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

COMMENT     On Feb 20, 2003 this sequence version replaced gi:28269366.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:

  TITLE     Direct Submission
  JOURNAL   Submitted (10-FEB-2000) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Mar 1, 2000 this sequence version replaced gi:6958060.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html

            Center clone name: 329_P_13
        -------------- Summary Statistics
            Sequencing vector: M13; M77815; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Assembly program: Phrap; version 0.960731
            Consensus quality: 141366 bases at least Q40
            Consensus quality: 146249 bases at least Q30
            Consensus quality: 148083 bases at least Q20
            Insert size: 154000; agarose-fp
            Insert size: 149951; sum-of-contigs
            Quality coverage: 4.2 in Q20 bases; agarose-fp
            Quality coverage: 4.3 in Q20 bases; sum-of-contigs
        --------------.
        * NOTE: This is a 'working draft' sequence. It currently
        * consists of 19 contigs. The true order of the pieces
        * is not known and their order in this sequence record is
        * arbitrary. Gaps between the contigs are represented as
        * runs of N, but the exact sizes of the gaps are unknown.
        * This record will be updated with the finished sequence
        * as soon as it is available and the accession number will
        * be preserved.
        *        1     1186: contig of 1186 bp in length
        *     1187     1286: gap of 100 bp
        *     1287     2716: contig of 1430 bp in length
        *     2717     2816: gap of 100 bp
        *     2817     3885: contig of 1069 bp in length
        *     3886     3985: gap of 100 bp
        *     3986     4428: contig of 443 bp in length
        *     4429     4528: gap of 100 bp
        *     4529     6662: contig of 2134 bp in length
        *     6663     6762: gap of 100 bp
        *     6763     9149: contig of 2387 bp in length
        *     9150     9249: gap of 100 bp
        *     9250    12293: contig of 3044 bp in length
        *    12294    12393: gap of 100 bp
        *    12394    16919: contig of 4526 bp in length
        *    16920    17019: gap of 100 bp
        *    17020    22858: contig of 5839 bp in length
        *    22859    22958: gap of 100 bp
        *    22959    28829: contig of 5871 bp in length
        *    28830    28929: gap of 100 bp
        *    28930    38397: contig of 9468 bp in length
        *    38398    38497: gap of 100 bp
        *    38498    46298: contig of 7801 bp in length
        *    46299    46398: gap of 100 bp
        *    46399    55275: contig of 8877 bp in length
        *    55276    55375: gap of 100 bp
        *    55376    65891: contig of 10516 bp in length
        *    65892    65991: gap of 100 bp
        *    65992    78122: contig of 12131 bp in length
        *    78123    78222: gap of 100 bp

            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 150828 bases at least Q40
                Consensus quality: 154584 bases at least Q30
                Consensus quality: 156053 bases at least Q20
                Insert size: 163000; agarose-fp
                Insert size: 157059; sum-of-contigs
                Quality coverage: 4.9 in Q20 bases; agarose-fp
                Quality coverage: 5.1 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 11 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3521: contig of 3521 bp in length
            *     3522     3621: gap of 100 bp
            *     3622     8787: contig of 5166 bp in length
            *     8788     8887: gap of 100 bp
            *     8888    15129: contig of 6242 bp in length
            *    15130    15229: gap of 100 bp
            *    15230    23646: contig of 8417 bp in length
            *    23647    23746: gap of 100 bp
            *    23747    34488: contig of 10742 bp in length
            *    34489    34588: gap of 100 bp
            *    34589    45971: contig of 11383 bp in length
            *    45972    46071: gap of 100 bp
            *    46072    61548: contig of 15477 bp in length
            *    61549    61648: gap of 100 bp
            *    61649    76890: contig of 15242 bp in length
            *    76891    76990: gap of 100 bp
            *    76991    93810: contig of 16820 bp in length
            *    93811    93910: gap of 100 bp
            *    93911   111867: contig of 17957 bp in length
            *   111868   111967: gap of 100 bp
            *   111968   158059: contig of 46092 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-FEB-2000) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On May 25, 2000 this sequence version replaced gi:7342073.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html

            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 181728 bases at least Q40
                Consensus quality: 185239 bases at least Q30
                Consensus quality: 186925 bases at least Q20
                Insert size: 175000; agarose-fp
                Insert size: 188610; sum-of-contigs
                Quality coverage: 8.5 in Q20 bases; agarose-fp
                Quality coverage: 7.9 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 18 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

            Contact: zfish-help@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
```

```
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml DKEY-29K19
            is from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5.

            --------------------
            Sequence Quality Assessment:
             This entry has been annotated with sequence quality
             estimates computed by the Phrap assembly program.
             All manually edited bases have been reduced to quality zero.
             Quality levels above 40 are expected to have less than
             1 error in 10,000 bp.
             Base-by-base quality values are not generally visible from the
             GenBank flat file format but are available as part
             of this entry's ASN.1 file.

            This sequence was finished as follows unless otherwise noted:
            all regions were either double-stranded or sequenced with an
            alternate chemistry or covered by high quality data (i.e., Phred
            quality >= 30); an attempt was made to resolve all sequencing
            problems, such as compressions and repeats; all regions were
            covered by at least one plasmid subclone or more than one M13
            subclone; and the assembly was confirmed by restriction digest.
            --------------------
            Sequence Validation:
             This sequence has been validated by Multiple Complete Digest
             fingerprinting. Comparison of the experimentally derived digest
             fragments with sequence-predicted fragments is given below.
             The electronically-digested sequence consists of both insert and
             vector, in order to accurately represent the entire circular BAC.
             Small fragments below a variable cutoff (approximately 400-800 bp)
             are not resolved in the fingerprint and hence do not appear
             in the table. There are no significant remaining discrepancies
             between the experimental and predicted values. Uniquely ordered
             fragments are separated by dashed lines.

            Sequence Quality Assessment:
             This entry has been annotated with sequence quality
             estimates computed by the Phrap assembly program.
```

All manually edited bases have been reduced to quality zero..
Quality levels above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
GenBank flat file format but are available as part
of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted:
all regions were either double-stranded or sequenced with an
alternate chemistry or covered by high quality data (i.e., Phred
quality >= 30); an attempt was made to resolve all sequencing
problems, such as compressions and repeats; all regions were
covered by at least one plasmid subclone or more than one M13
subclone; and the assembly was confirmed by restriction digest.

Sequence Validation:
This sequence has been validated by Multiple Complete Digest
fingerprinting. Comparison of the experimentally derived digest
fragments with sequence-predicted fragments is given below.
The electronically-digested sequence consists of both insert and
vector, in order to accurately represent the entire circular BAC.
Small fragments below a variable cutoff (approximately 400-800 bp)
are not resolved in the fingerprint and hence do not appear
in the table. There are no significant remaining discrepancies
between the experimental and predicted values. Uniquely ordered
fragments are separated by dashed lines.

```
            ---------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu/gsc
                Contact: sapiens@watson.wustl.edu
            ---------- Summary Statistics
                Center project name: H_NH0761E21
            ----------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO. For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-58N10; the clone sequenced
            to the right is RP11-63A11, 2000 bp overlap.  Actual start of this
            clone is at base position 1 of RP11-761E21; actual end is at base
            position 77234 of RP11-63A11.

            The region from 55547 to 55670 is covered only by a pcr product
            from clone DNA. Polymorphisms exist between AC113151 and AC111006.
            Data from AC113151 and AC007799 was used to finish AC111006.

            Summary Statistics
            Consensus quality: 182477 bases at least Q40
            Consensus quality: 187876 bases at least Q30
            Consensus quality: 188750 bases at least Q20
            Estimated insert size: 192000; agarose-fp estimation
            Estimated insert size: 190581; sum-of-contigs estimation
            Quality coverage:  6.71 in Q20 bases; agarose-fp estimation
            Quality coverage:  6.76 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 10 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1230: contig of 1230 bp in length
            *     1231     1330: gap of unknown length
            *     1331     3606: contig of 2276 bp in length
            *     3607     3706: gap of unknown length
            *     3707     6459: contig of 2753 bp in length
            *     6460     6559: gap of unknown length
            *     6560    10289: contig of 3730 bp in length
            *    10290    10389: gap of unknown length

            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-362A12; the clone sequenced
            to the right is RP11-507C12.  Actual start of this clone is at base
            position 1 of RP11-279B11; actual end is at base position 155106 of
            RP11-279B11.

            Data from AC104409 and AC093040 was used to finish this clone,
            AC104069. Polymorphisms have been identified between AC104409 and
            AC104069.

            The sequence of AC027210 has been incorporated into AC104069.

            Center project name: bA131B16
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Sequencing vector: plasmid; L08752; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Consensus quality: 160247 bases at least Q40
            Consensus quality: 160580 bases at least Q30
            Consensus quality: 160708 bases at least Q20
            Insert size: 160827; sum-of-contigs
            Insert size: 165550; agarose-fp
            Quality coverage: 6.63x in Q20 bases; sum-of-contigs Quality
            coverage: 6.69x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    67522: contig of 67522 bp in length
            *    67523    67622: gap of 100 bp
            *    67623   104112: contig of 36490 bp in length
            *   104113   104212: gap of 100 bp
            *   104213   161027: contig of 56815 bp in length.

COMMENT     On Jun 27, 2005 this sequence version replaced gi:66710852.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            --------------
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            DKEY-20D16 is from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            Any regions longer than 1kb tagged as misc-feature 'unsure' are
            part of a tandem repeat of more than 10kb in length where it has
            not been possible to anchor the base differences between repeat
            copies.  The region has been built up based on the repeat element
            to match the total size of repeat indicated by restriction digest,
            but repeat copies may not be in the correct order and the usual
            finishing criteria may not apply.

            ------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 24 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1086: contig of 1086 bp in length

            Center code: WUGSC
            Web site:http://genome.wustl.edu/gsc/index.shtml
            -------------- Project Information --------------
            Center project name: H_NH0706A13
            -------------- Summary Statistics  --------------
            Sequencing vector: M13; 78%
            Sequencing vector: plasmid; 22%
            Chemistry: Dye-primer ET; 78% of reads
            Chemistry: Dye-terminator Big Dye; 22% of reads
            Assembly program: Phrap; version 0.990319
            Consensus quality: 167325 bases at least Q40
            Consensus quality: 175317 bases at least Q30
            Consensus quality: 180039 bases at least Q20
            Insert size: 193000; agarose-fp
            Insert size: 188037; sum-of-contigs
            Quality coverage: 3.04 in Q20 bases; agarose-fp
            Quality coverage: 3.18 in Q20 bases; sum-of-contigs
            ------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 28 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     1325: contig of 1325 bp in length
            *    1326     1425: gap of unknown length
            *    1426     2586: contig of 1161 bp in length
            *    2587     2686: gap of unknown length
            *    2687     4338: contig of 1652 bp in length
            *    4339     4438: gap of unknown length
            *    4439     5989: contig of 1551 bp in length

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New isolated nucleic acid comprising neocentromere sequences from
PT eukaryotic chromosome - used to produce replicable, segregating
PT artificial chromosomes that can carry large amounts of DNA for gene
PT therapy.
XX
PS Claim 8; Fig 6; 540pp; English.
XX
CC The present sequence represents the HC-contig derived from normal human
CC chromosome 10, 10q25.2 region. This region can be naturally mutated to
CC produce an unusual chromosomal marker referred to as mardel(10). The
CC mardel(10) marker is mitotically stable and contains a functional
CC neocentromere at a location regarded as non-centromeric. This
CC neocentromere maps to q25.2 on chromosome 10. The specification describes
CC nucleic acid sequences derived from a eukaryotic chromosome, including a
CC neocentromere or its functional derivative or hybrid, that are able, in a
CC compatible cell, of replicating, acting as extra-chromosomal element and
CC segregating during cell division. The sequences can be used to construct
CC artificial chromosomes for use in gene therapy comprising a replicable,
CC segregating nucleic acid that confers a specific phenotype on cells.
CC Human artificial chromosomes can propagate in human cells and carry large
CC amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal,
CC they are not mutagenic. The artificial chromosomes are also useful for
CC generation of transgenic plants and animals, in production of proteins
CC and to make diagnostic reagents, e.g. for expression of cytokines,
CC receptors and growth factors, or to increase the copy number of a gene in
CC a cell. The constructs may also be used for functional and structural
CC analysis of chromosomes

PT therapy.
XX
PS Claim 10; Page 181-194; 540pp; English.
XX
CC The present sequence represents a bacterial artificial chromosome (BAC)
CC contig, and exemplifies the invention. The specification describes
CC nucleic acid sequences derived from a eukaryotic chromosome, including a
CC neocentromere or its functional derivative or hybrid, that are able, in a
CC compatible cell, of replicating, acting as extra-chromosomal element and
CC segregating during cell division. The sequences can be used to construct
CC artificial chromosomes for use in gene therapy comprising a replicable,
CC segregating nucleic acid that confers a specific phenotype on cells.
CC Human artificial chromosomes can propagate in human cells and carry large
CC amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal,
CC they are not mutagenic. The artificial chromosomes are also useful for
CC generation of transgenic plants and animals, in production of proteins
CC and to make diagnostic reagents, e.g. for expression of cytokines,
CC receptors and growth factors, or to increase the copy number of a gene in
CC a cell. The constructs may also be used for functional and structural
CC analysis of chromosomes

XX
PS Claim 9; Fig 16A; 540pp; English.
XX
CC The present sequence represents the NC-contig derived from a mutated
CC human chromosome 10, 10q25.2 region. The sequence contains an unusual
CC chromosomal marker referred to as mardel(10). The mardel(10) marker is
CC mitotically stable and contains a functional neocentromere at a location
CC regarded as non-centromeric. This neocentromere maps to q25.2 on
CC chromosome 10. The specification describes nucleic acid sequences derived
CC from a eukaryotic chromosome, including a neocentromere or its functional
CC derivative or hybrid, that are able, in a compatible cell, of
CC replicating, acting as extra-chromosomal element and segregating during
CC cell division. The sequences can be used to construct artificial
CC chromosomes for use in gene therapy comprising a replicable, segregating
CC nucleic acid that confers a specific phenotype on cells. Human artificial
CC chromosomes can propagate in human cells and carry large amounts of DNA
CC (e.g. therapeutic genes), and, being extra-chromosomal, they are not
CC mutagenic. The artificial chromosomes are also useful for generation of
CC transgenic plants and animals, in production of proteins and to make
CC diagnostic reagents, e.g. for expression of cytokines, receptors and
CC growth factors, or to increase the copy number of a gene in a cell. The
CC constructs may also be used for functional and structural analysis of
CC chromosomes

PT New isolated nucleic acid comprising neocentromere sequences from
PT eukaryotic chromosome - used to produce replicable, segregating
PT artificial chromosomes that can carry large amounts of DNA for gene
PT therapy.
XX
PS Claim 10; Page 235; 540pp; English.
XX
CC The present sequence represents a bacterial artificial chromosome (BAC)
CC contig, and exemplifies the invention. The specification describes
CC nucleic acid sequences derived from a eukaryotic chromosome, including a
CC neocentromere or its functional derivative or hybrid, that are able, in a
CC compatible cell, of replicating, acting as extra-chromosomal element and
CC segregating during cell division. The sequences can be used to construct
CC artificial chromosomes for use in gene therapy comprising a replicable,
CC segregating nucleic acid that confers a specific phenotype on cells.
CC Human artificial chromosomes can propagate in human cells and carry large
CC amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal,
CC they are not mutagenic. The artificial chromosomes are also useful for
CC generation of transgenic plants and animals, in production of proteins
CC and to make diagnostic reagents, e.g. for expression of cytokines,
CC receptors and growth factors, or to increase the copy number of a gene in
CC a cell. The constructs may also be used for functional and structural
CC analysis of chromosomes

XX

```
CC   The present invention relates to a method (M1) for identifying genes
CC   involved in plant resistance or response to pathogenic infection. M1
CC   comprises identifying a gene whose expression is significantly altered in
CC   the incompatible interaction of plant gene expression relative to
CC   expression of the gene in an uninfected plant, in a mutant plant that
CC   does not express a gene associated with response to pathogenic infection,
CC   or in a corresponding incompatible or compatible interaction. (M1) is
CC   useful for conferring resistance to resistance or tolerance to a plant to
CC   bacterial, fungal or viral infection. The present sequence was used to
CC   illustrate the invention.

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 15671; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
CC   is used in the exemplification of the invention

PT   New nucleic acid that is a 5' expressed sequence tag (5' EST) for
PT   obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
PT   diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
PS   Claim 1; SEQ ID NO 19284; 71pp + Sequence Listing; English.
XX
CC   The present sequence is one of a large number of 5' ESTs derived from
CC   mRNAs encoding secreted proteins. No ORF has yet been conclusively
CC   identified within the present sequence. The 5' ESTs were prepared from
CC   total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
CC   sequences usually correspond mainly to the 3' untranslated region (UTR)
CC   of the mRNA because they are often obtained from oligo-dT primed cDNA
CC   libraries. Such ESTs are not well suited for isolating cDNA sequences
CC   derived from the 5' ends of mRNAs and even in those cases where longer
CC   cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
CC   ESTs are derived from mRNAs with intact 5' ends and can therefore be used
CC   to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
CC   diagnostic, forensic, gene therapy and chromosome mapping procedures.
CC   They are used to obtain upstream regulatory sequences and to design
CC   expression and secretion vectors

PT   New purified and isolated DNA sequence having protein production
PT   increasing activity comprises a bent DNA element and a binding site for a
PT   DNA binding protein, useful for increasing protein production activity in
PT   eukaryotic host cell.
XX
PS   Claim 4; SEQ ID NO 23; 282pp; English.
XX
CC   The invention relates to a purified and isolated DNA sequence having
CC   protein production increasing activity comprising at least one bent DNA
CC   element, and at least one binding site for a DNA binding protein. The
CC   purified and isolated DNA sequence comprising a first and a second
CC   isolated matrix attachment region (MAR) nucleotide sequence, which is a
CC   MAR nucleotide sequence selected from a purified and isolated DNA
CC   sequence above, a purified and isolated MAR DNA above, a purified and
CC   isolated cLysMAR element and/or fragment, a synthetic MAR sequence, a
CC   sequence complementary to it, its molecular chimera, or its combinations
CC   and variants, is useful for increasing protein production activity in a
CC   eukaryotic host cell. The present sequence represents a human matrix
CC   attachment region DNA.

PT   New nucleic acids or oligomers, useful for diagnosing or treating
PT   diseases associated with DNA transcription, e.g. immunological disorders,
PT   Werner syndrome, psoriasis, myocardial infarction, solid tumors or
PT   cancer.
XX
PS   Claim 1; SEQ ID NO 239; 32pp; English.
XX
CC   The invention relates to a nucleic acid, which comprises a segment of the
CC   chemically pretreated DNA of genes associated with DNA transcription from
CC   one of 346 sequences, and an oligomer, in particular an oligonucleotide
CC   or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
CC   to the chemically pretreated DNA of genes associated with DNA
CC   transcription. The set of oligomer probes are useful for detecting the
CC   cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
CC   in a chemically pretreated genomic DNA. The nucleic acids are useful for
CC   diagnosing or treating diseases associated with DNA transcription
```

```
CC   (particularly with the methylation status), e.g. adenosine deaminase

PS   Claim 16; Page 17-18; 31pp; Japanese.
XX
CC   The present sequence encodes human dlg-1 molecule. The present invention
CC   describes human discs large 1 gene (dlg) family expressible in nerve
CC   tissue. Also described are: (1) a polynucleotide (PN) encoding dlg and
CC   comprising a 3100 (I) or 3213 bp (II) sequence; (2) RNA corresponding to
CC   PN having sequences (I) and (II); (3) RNA having a base sequence
CC   translated by dlg; (4) an antisense PN having a at least 15 bp sequence,
CC   and which is a part of PN of (1); (5) a derivative of the antisense PN;
CC   (6) an antibody specific for dlg, and (7) an antibody specific for a
CC   polypeptide having a 817 or 849 aa sequence. The polypeptide, RNA's and
CC   antibodies can be used for detection of dlg. The antisense PN can be used
CC   as a therapeutic composition for treating cancer

PT   New nedasin protein, useful in the investigation of the mechanism of
PT   formation of malignant tumors.
```

```
XX
PS   Example 1; Page 87-96; 104pp; Japanese.
XX
CC   The present sequence encodes tumour suppressor protein NE-dlg. The
CC   specification describes mammalian proteins, designated nedasin, which
CC   bind to the tumour suppressor protein NE-dlg. Nedasin is involved with
CC   the regulation of tumour suppression mechanisms. Nedasin and antibodies
CC   recognizing it are useful in the investigation of the mechanism of
CC   formation of malignant tumours. The polynucleotides are useful for
CC   screening cDNA libraries, and as a source of primers and probes

PT   Identifying a candidate beta-catenin pathway modulating agent for
PT   diagnosing or treating cancer by detecting a test agent-biased activity
PT   of the assay system comprising a purified MBCAT polypeptide or nucleic
PT   acid.
XX
PS   Example; Page 53-54; 81pp; English.
XX
CC   The invention relates to genes that modify beta-catenin pathway and to
CC   the identification of human MBCAT (modifiers of beta-catenin) genes. The
CC   MBCAT polypeptides are therapeutic targets for disorders associated with
CC   beta-catenin function and are useful for manufacturing a medicament for
CC   diagnosing or treating breast, colon, lung or ovary cancer. The present
CC   sequence represents a human MBCAT polypeptide encoding DNA

PT Human discs large 1 gene family - useful in, e.g. therapeutic
PT composition(s) for treating cancer.
XX
PS Claim 17; Page 20-21; 31pp; Japanese.
XX
CC The present sequence encodes human dlg-2 molecule. The present invention
CC describes human discs large 1 gene (dlg) family expressible in nerve
CC tissue. Also described are: (1) a polynucleotide (PN) encoding dlg and
CC comprising a 3100 (I) or 3213 bp (II) sequence; (2) RNA corresponding to
CC PN having sequences (I) and (II); (3) RNA having a base sequence
CC translated by dlg; (4) an antisense PN having a at least 15 bp sequence,
CC and which is a part of PN of (1); (5) a derivative of the antisense PN;
CC (6) an antibody specific for dlg, and (7) an antibody specific for a
CC polypeptide having a 817 or 849 aa sequence. The polypeptide, RNA's and
CC antibodies can be used for detection of dlg. The antisense PN can be used
CC as a therapeutic composition for treating cancer

PT Novel isolated nucleic acid molecule associated with cancerous state of
PT prostate cells and correlating with presence of prostate cancer, useful
PT for detecting presence of prostate cancer, stage of prostate cancer.
XX
PS Claim 1; Page 4841-4843; 11750pp; English.
XX
CC The invention relates to an isolated nucleic acid molecule (I) comprising
CC a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the
CC specification or its complement. (I) is useful for: (a) assessing whether
CC a patient is afflicted with prostate cancer; (b) monitoring the
CC progression of prostate cancer in a patient; (c) assessing the efficacy
CC of a test compound to inhibit prostate cancer in a patient; (d) assessing
CC the efficacy of a therapy for inhibiting prostate cancer in a patient;
CC (e) selecting a composition for inhibiting prostate cancer in a patient;
CC (f) assessing the prostate cell carcinogenic potential of a compound; (g)
CC determining whether prostate cancer has metastasized in a patient; (h)
CC assessing the aggressiveness or indolence of prostate cancer in a patient
CC ; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker

PT   Identifying at least one gene involved in plant resistance or response to
PT   pathogenic infection for conferring resistance or tolerance to a plant to
PT   bacterial, fungal or viral infection by determining or detecting plant
PT   gene expression.
XX
PS   Claim 27; SEQ ID NO 6508; 899pp; English.
XX
CC   The present invention relates to a method (M1) for identifying genes
CC   involved in plant resistance or response to pathogenic infection. M1
CC   comprises identifying a gene whose expression is significantly altered in
CC   the incompatible interaction of plant gene expression relative to
CC   expression of the gene in an uninfected plant, in a mutant plant that
CC   does not express a gene associated with response to pathogenic infection,
CC   or in a corresponding incompatible or compatible interaction. (M1) is
CC   useful for conferring resistance to resistance or tolerance to a plant to
CC   bacterial, fungal or viral infection. The present sequence was used to
CC   illustrate the invention.

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 13926; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
CC   is used in the exemplification of the invention

PT   Treating a condition e.g., involuntary muscle contraction, spasmodic
PT   dysphonia, laryngeal dystonia, or wrinkles in an animal or human,
PT   comprises administering a Clostridium neurotoxin component using a
PT   needleless syringe.
XX
PS   Disclosure; Page 15-16; 33pp; English.
XX
CC   The invention describes a method of treating a condition in an animal or
CC   human comprising administering a Clostridium neurotoxin component (I) to
CC   the subject using a needleless syringe, or administering DNA encoding (I)
CC   to a cell of the subject in situ. The method is used for treating a
CC   condition e.g., involuntary muscle contraction or conditions such as
CC   spasmodic dysphonia, laryngeal dystonia, oromandibular dysphonia, lingual
CC   dystonia, cervical dystonia, focal hand dystonia, blepharospasm,
CC   strabismus, hemifacial spasm, eyelid disorder, cerebral palsy, focal
CC   spasticity, spasmodic colitis, neurogenic bladder, anisumus, limb
CC   spasticity, tics, tremors, bruxism, anal fissure, achalasia,
CC   fibromyalgia, dysphagia, wrinkles or brow furrows. The method is also
CC   useful for immunisation against a neurotoxin. By using a needleless
CC   injector, an optimal delivery to a specific tissue layer, for example the
CC   dermis layer is achieved. In a case where the delivery is to the dermis
CC   and not to muscle tissues, the treatment may not cause a loss of motor
CC   function in the area being treated. Also, the use of a needleless
CC   injector, improves clinical safety by eliminating the risk of infection
CC   from accidental injury with needles or from potential splash back of
CC   bodily fluids from liquid jet injectors, thus avoiding the possibilities
CC   of cross-contamination of blood-borne pathogens such as human
CC   immunodeficiency virus (HIV) and hepatitis B. The needleless injector
CC   also offers an optimal and specific delivery of drug particles to treat
CC   conditions with little pain or skin damage such as bruising or bleeding.
CC   This sequence represents the Clostridium botulinum neurotoxin serotype A

PT New gene expression profile generated from primary, endothelial,
PT epithelial, and muscle cell types, useful for identifying disease
PT pathologies involving alterations of gene expression, e.g. cancer.
XX
PS Disclosure; Page 667-669; 850pp; English.
XX
CC The invention relates to a gene expression profile comprising one or more
CC genes (ABZ34889-ABZ35692) and generated from a cell type. The cell type
CC is a coronary artery endothelium, umbilical artery or vein endothelium,
CC aortic endothelium, dermal microvascular endothelium, pulmonary artery
CC endothelium, myometrium microvascular endothelium, keratinocyte
CC epithelium, bronchial epithelium, mammary epithelium, prostate
CC epithelium, renal cortical epithelium, renal proximal tubule epithelium,
CC small airway epithelium, renal epithelium, umbilical artery smooth
CC muscle, neonatal dermal fibroblast, pulmonary artery smooth muscle,
CC dermal fibroblast, neural progenitor cells, skeletal muscle, astrocytes,
CC aortic smooth muscle, mesangial cells, coronary artery smooth muscle,
CC bronchial smooth muscle, uterine smooth muscle, lung fibroblast,
CC osteoblasts or prostate stromal cell. The gene expression profile is used
CC for determining the level of RNA expression for a sample, determining the
CC phenotype of a cell and distinguishing cell types. The gene or a protein
CC expression profile is useful in identifying disease pathologies involving
CC alterations of gene expression. The assessment of expression profiles may
CC provide meaningful information with respect to tumour type and stage,
CC treatment methods, and prognosis. The gene or protein expression profile
CC may also be used for creating microarrays. The microarray is useful for
CC genetic and physical mapping of genomes, DNA sequencing, genetic or
CC medical diagnosis, genotyping of organisms, confirming cell or tissue
CC identifications and in identifying promising antibiotics, antiviral or
CC antifungal agents

PA   (HUMA-) HUMAN GENOME SCI INC.
XX
PI   Rosen CA,  Barash SC,  Ruben SM;
XX
DR   WPI; 2001-465569/50.
XX
PT   Isolated nucleic acid molecule encoding excretory system antigen is used
PT   in preventing, treating or ameliorating a medical condition.
XX
PS   Example 2; SEQ ID NO 1024; 574pp + Sequence Listing; English.
XX
CC   The invention relates to novel excretory system related human
CC   polynucleotides (AAI98567-AAI99503) and the encoded proteins (AAM99594-
CC   AAM99913) useful for preventing, treating or ameliorating medical
CC   conditions e.g. by protein or gene therapy, espeically disorders related
CC   to the excretory system. The genes are isolated from a range of human
CC   tissues disclosed in the specification. The nucleic acids, proteins,
CC   antibodies and (ant)agonists are useful in the diagnosis, treatment and
CC   prevention of: (a) cancer, e.g. breast and ovarian cancer and other
CC   cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal
CC   tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's
CC   disease, allergies, autoimmune haemolytic anaemia, autoimmune
CC   thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis,
CC   rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders
CC   such as myocardial ischaemias; (d) wound healing; (e) neurological
CC   diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases
CC   such as viral, bacterial, fungal and parasitic infections. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

XX
CC The invention relates to novel kidney related polynucleotides (AAI62971-
CC AAI63793) and the encoded polypeptides (AAM42417-AAM42691) collectively
CC known as kidney antigens and the use of such kidney antigens for
CC detecting disorders of the kidney, especially kidney cancer and kidney
CC cancer metastases. The polynucleotides and proteins are also useful for
CC preventing, treating or ameliorating medical conditions e.g. by protein
CC or gene therapy. The genes are isolated from a range of human tissues
CC disclosed in the specification. The nucleic acids, proteins, antibodies
CC and (ant)agonists are useful in the diagnosis, treatment and prevention
CC of: (a) cancer, e.g. breast and ovarian cancer, and other cancers of the
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC lung, or urogenital; (b) immune disorders e.g. Addison's disease,
CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC bacterial, fungal and parasitic infections. Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT Classifying a breast cancer patient according to prognosis comprises
PT determining the similarity between the level of expression of each of
PT five genes in a cell sample taken from patient, to control levels.
XX
PS Disclosure; SEQ ID NO 67; 226pp; English.
XX
CC The invention relates to a method of classifying a breast cancer patient
CC according to prognosis by determining the similarity between the level of
CC expression of each of five genes for which markers are listed in the
CC specification, in a cell sample taken from the breast cancer patient, to
CC control levels of expression for each respective five genes to obtain a
CC patient similarity value. The methods are useful for classifying a breast
CC cancer patient according to prognosis. Kits and computer program products
CC are useful for data analysis using the diagnostic, prognostic and
CC statistical methods of the invention. This sequence corresponds to a
CC marker used in the method of the invention.

PT   Fragments of chemically modified genes associated with tumor suppressor
PT   genes and oncogenes, useful in designing primers and probes for analyzing
PT   diseases associated with cytosine methylation state e.g. cancer.
XX
PS   Claim 1; SEQ ID NO 26; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and oncogenes
CC   having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC   500 are missing from the sequence listing) sequences (Ss) and sequences
CC   complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC   oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC   probes for detecting the cytosine methylation state and/or single
CC   nucleotide polymorphisms and also to be used in an array for analysing
CC   diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC   probes can also be used in a method for ascertaining genetic and/or
CC   epigenetic parameters for the diagnosis and/or therapy of existing
CC   diseases or the predisposition to specific diseases, by analysing
CC   cytosine methylations. The parameters may be compared to another set of
CC   genetic and/or epigenetic parameters, the differences serving as basis
CC   for diagnosis and/or prognosis events which are disadvantageous to
CC   patients. The present sequence is one of the 533 genomic sequences
CC   derived from tumour suppressor genes and oncogenes. Sequences with even
CC   numbered Seq ID numbers are the complementary sequence of the
CC   corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC   535, except for those whose partner sequence is missing). Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PS   Claim 3; SEQ ID NO 1504; 164pp; English.
XX
CC   The present invention relates to Aspergillus fumigatus genes that are
CC   essential and are potential targets for drug screening. The methods and
CC   compositions of the present invention are useful for diagnosing and/or
CC   treating invasive Aspergillus fumigatus infection, including the allergic
CC   forms of the disease, such as Farmer's lung disease. They can also be
CC   used in various drug discovery purposes, such as expression of the
CC   recombinant protein, hybridization assay and construction of nucleic acid
CC   arrays. The present sequence represents an Aspergillus fumigatus
CC   essential gene sequence containing all introns, used during diagnosis and
CC   drug development in the invention. These genes share a high degree of
CC   sequence conservation with known essential genes of candida albicans. The
CC   sequence data for this patent is not represented in the printed
CC   specification, but was obtained in electronic format from WIPO.

PT   New purified and isolated DNA sequence having protein production
PT   increasing activity comprises a bent DNA element and a binding site for a
PT   DNA binding protein, useful for increasing protein production activity in
PT   eukaryotic host cell.
XX
PS   Disclosure; SEQ ID NO 84; 282pp; English.
XX
CC   The invention relates to a purified and isolated DNA sequence having
CC   protein production increasing activity comprising at least one bent DNA
CC   element, and at least one binding site for a DNA binding protein. The
CC   purified and isolated DNA sequence comprising a first and a second
CC   isolated matrix attachment region (MAR) nucleotide sequence, which is a
CC   MAR nucleotide sequence selected from a purified and isolated DNA
CC   sequence above, a purified and isolated MAR DNA above, a purified and
CC   isolated cLysMAR element and/or fragment, a synthetic MAR sequence, a
CC   sequence complementary to it, its molecular chimera, or its combinations
CC   and variants, is useful for increasing protein production activity in a
CC   eukaryotic host cell. The present sequence represents a human chromosome
CC   1 contig DNA.

PT fungal infections, such as Farmer's lung disease.
XX
PS Claim 3; SEQ ID NO 504; 164pp; English.
XX
CC The present invention relates to Aspergillus fumigatus genes that are
CC essential and are potential targets for drug screening. The methods and
CC compositions of the present invention are useful for diagnosing and/or
CC treating invasive Aspergillus fumigatus infection, including the allergic
CC forms of the disease, such as Farmer's lung disease. They can also be
CC used in various drug discovery purposes, such as expression of the
CC recombinant protein, hybridization assay and construction of nucleic acid
CC arrays. The present sequence represents an Aspergillus fumigatus
CC essential gene full length genomic sequence, used during diagnosis and
CC drug development in the invention. These genes share a high degree of
CC sequence conservation with known essential genes of candida albicans. The
CC sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format from WIPO.

XX
PT   New isolated ovarian and/or breast cancer related nucleic acids and
PT   polypeptides, useful for diagnosing, treating and/or preventing human
PT   diseases and disorders, particularly ovarian and/or breast cancer.
XX
PS   Disclosure; SEQ ID NO 536; 577pp + Sequence Listing; English.
XX
CC   The invention relates to novel genes (ABA07454-ABA08224) and proteins
CC   (ABB10743-ABB10980) useful for preventing, treating or ameliorating
CC   medical conditions e.g. by protein or gene therapy. The genes are
CC   isolated from a range of human tissues disclosed in the specification.
CC   The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC   the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC   ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC   breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC   disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC   anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC   multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC   cardiovascular disorders such as myocardial ischaemias; (d) wound healing
CC   ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC   infectious diseases such as viral, bacterial, fungal and parasitic
CC   infections. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
PT   New isolated P-Rex1 protein or its derivative useful for discovering
PT   drugs capable of reducing or inhibiting inflammation, metastasis, septic
PT   shock, neurodegeneration or atherosclerosis, or for identifying P-Rex1
PT   modulators.
XX
PS   Disclosure; SEQ ID NO 14; 198pp; English.
XX
CC   This invention relates to a novel protein useful as an anti-inflammatory
CC   target. Specifically, it refers to the guanine-nucleotide exchange factor
CC   (GEF) named P-Rex1, which has also been identified as a
CC   phosphatidylinositol(3,4,5)P3-sensitive activator of Rac (a monomeric
CC   GTPase). Accordingly, P-Rex1 can be described as having Rac-GEF activity
CC   and is adapted to function downstream of activation of heterotrimeric G
CC   proteins in neutrophils. The present invention describes this protein as
CC   a useful target for drug discovery or for discovery of a drug capable of
CC   reducing or inhibiting inflammation, metastasis, septic shock,
CC   neurodegeneration or atherosclerosis. As such, P-Rex1 can have various
CC   activities including antiinflammatory, cytostatic, antibacterial,
CC   immunosuppressive, neuroprotective and antiarteriosclerotic. Furthermore,
CC   the protein or its mutant, the nucleic acid or appropriate antibody may
CC   be used in a screening assay to identify a modulator of P-Rex1 binding,
CC   activity or expression. This polynucleotide is the human P-Rex1 genomic
CC   DNA sequence of the invention.

XX
CC   The present invention provides a number of human immune system associated
CC   genes which are modified by the methylation of cytosines. The sequences
CC   can be used in the diagnosis and treatment of immune system disorders,
CC   including eye diseases such as retinopathy, neovascular glaucoma and
CC   macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC   leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC   rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC   diseases. The present sequence is a gene of the invention

PT   Nucleic acid, useful for diagnosis and therapy of diseases associated
PT   with cell signaling e.g. cancer, comprises chemically modified genomic
PT   sequences of genes associated with cell signaling.
XX
PS   Claim 1; SEQ ID NO 150; 24pp + Sequence Listing; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of at least
CC   18 bases of a segment of chemically pretreated DNA of genes associated
CC   with cell signalling. The activity of the modified sequences of the
CC   invention may be described as cytostatic. The object of the invention is
CC   to provide the chemically modified DNA of genes associated with cell
CC   signalling, as well as oligonucleotides and/or PNA-oligomers for
CC   detecting cytosine methylations, as well as a method which is
CC   particularly suitable for the diagnosis and/or therapy of genetic and
CC   epigenetic parameters of genes associated with cell signalling. The
CC   chemically modified DNA provided by the invention is useful for diagnosis
CC   and therapy of diseases such as solid tumours and cancer. The sequences
CC   given in records ABL70111-ABL70626 represent chemically pre-treated
CC   genomic DNA's of genes associated with cell signalling. Note: The
CC   sequence data for this patent is not represented in the printed
CC   specification, but is based on sequence information supplied by the
CC   European Patent Office

PT   New nucleic acid derived from chemically treated metastasis genes, useful
PT   for diagnosis of cancers by analysis of cytosine methylation, also for
PT   treatment.
XX
PS   Claim 1; SEQ ID NO 90; 9pp; English.
XX
CC   The invention relates to a nucleic acid comprising at least 18 bases from
CC   a segment of the chemically pretreated DNA of genes associated with
CC   metastasis, i.e. any of ADS99709-ADS99906 human genomic sequences or any
CC   of the 19 sequences appearing as ADS99911-ADS99929. SEQ ID 2,4,6 etc are
CC   the complements of SEQ ID 1,3,5, etc. Also included are an oligomer
CC   (particularly an oligonucleotide or peptide nucleic acid) comprising at
CC   least one base sequence of at least 9 bases which hybridises to (or is
CC   identical with) the sequences referred to above, producing an array of
CC   the oligomers on a carrier, obtaining genetic and/or epigenetic
CC   parameters for diagnosis and/or therapy of diseases (or predisposition to
CC   them) by analysis of cytosine methylation and a kit comprising a
CC   bisulphite (disulphite or hydrogen sulphite) and the oligomers. In the
CC   method of above 5-unmethylated cytosines in a genomic DNA sample are
CC   converted chemically to uracil, or another base with hybridisation
CC   properties different from those of cytosine, then fragments of the
CC   treated DNA amplified (particularly by polymerase chain reaction) using
CC   the oligomers and a polymerase (preferably heat stable) to produce
CC   labelled amplicons. These are tested for hybridisation to an array of
CC   oligomers and any hybridisation detected. The amplicons are labelled with
CC   fluorescent or radioactive markers, or with a detachable mass marker to
CC   allow their detection by mass spectrometry, specifically using the matrix
CC   -assisted laser desorption/ionisation (MALDI) or electrospray techniques.
CC   To improve detection in the mass spectrometer, fragments formed in the
CC   instrument have only a single net charge (positive or negative). The
CC   genomic DNA is from e.g. a cell line, biopsy sample, blood, or paraffin-
CC   embedded tissue sample. Oligonucleotides or peptide-nucleic acids that
CC   are complementary to (or identical with) parts of the nuclei acids listed
CC   above may be used as primers for amplification of the nucleic acids or
CC   their complements, and for determining cytosine methylation status and/or
CC   single nucleotide polymorphisms in metastasis-related genes. They can be
CC   used for analysis of diseases associated with methylation of CpG
CC   dinucleotides and to determine (epi)genetic parameters for diagnosis
CC   and/or therapy of disease (or predisposition). The genomic DNA sequences
CC   are useful for diagnosis and therapy of solid tumours and cancer. The
CC   present sequence is the complementary sequence to a bisulphite treated
CC   human gene associated with metastasis. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030148327.

PT   New nucleic acid associated with lactation, and muscle and fat
PT   deposition, useful for genome mapping, gene identification and analysis,
PT   cattle breeding, or for genetically improving cattle.
XX
PS   Claim 2; SEQ ID NO 4584; 245pp; English.
XX
CC   The invention relates to a purified nucleic acid molecule associated with
CC   lactation or muscle and fat deposition (designated LMFD), derived from
CC   cattle, and the LMFD nucleic acid can specifically hybridise to a second
CC   nucleic acid molecule comprising any of 15112 nucleotide sequences,
CC   appearing as ABX34836-ABX49947, or complements of them. Also included are
CC   ; (1) a transformed cell having a nucleic acid comprising an LMFD nucleic
CC   acid linked to a promoter and a 3' non- translated sequence that
CC   functions in the cell to cause termination of transcription and addition
CC   of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and
CC   (2) determining a level or pattern of a molecule in a bovine cell or
CC   tissue comprising: (a) incubating a marker nucleic acid (comprising any
CC   of the 15112 nucleic acid sequences or its complement or fragment) with a
CC   complementary nucleic acid molecule obtained from the bovine cell or
CC   tissue, where hybridisation between the marker nucleic acid and the
CC   complementary nucleic acid permits the detection of the molecule; and (b)
CC   detecting the level or pattern of the complementary nucleic acid, where
CC   the detection of the complementary nucleic acid is predictive of the
CC   level or pattern of the molecule. The LMFD nucleic acid is used for
CC   determining a level or pattern of a molecule in a bovine cell or tissue.
CC   It is useful for genome mapping, gene identification and analysis, cattle
CC   breeding, preparation of constructs for use in cattle gene expression, or
CC   for genetically improving cattle. The present sequence is one of the
CC   15112 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The
CC   present sequence was not shown in the specification but was obtained in
CC   electronic format from the USPTO web site:
CC   seqdata.uspto.gov/sequence.html?DocID=20020137139

PT   botulinum.
XX
```

PS Example 3; Page 52; 54pp; English.
XX
CC The invention relates to novel vaccines that induce a protective immune
CC response against botulinum neurotoxin (BoNT) serotypes A, B, C, D, E, F
CC and G (BoNTA-BoNTG). The vaccine of the invention is novel recombinant
CC DNA construct comprising a vector, and at least one nucleic acid fragment
CC comprising a C-terminal heavy chain fragment (Hc) from BoNT serotypes A-
CC G. In preferred embodiments of the invention, the vector is a Venezuelan
CC equine encephalitis virus (VEE) replicon vector. Use of this vector
CC results in the production of large amounts of a protein encoded by a
CC sequence cloned into the replicon. The constructs are used to produce
CC vaccines against botulism. The proteins can also be used as diagnostic
CC tools for the diagnosis of botulism. The transformed host cells can be
CC used to analyse the effectiveness of drugs and agents which inhibit toxin
CC effects. The vaccine currently used against botulism is dangerous and
CC expensive to produce, and contains formalin, which is very painful for
CC the recipient. Also, the vaccine is incomplete, in that only 5 of the 7
CC serotypes are represented in the formulation. The novel vaccine of
CC overcomes these problems, as it is easily purified, and available in
CC large quantities. It is also expressed in the lymph nodes for a better
CC immune response. The present sequence represents DNA encoding native
CC BoNTA heavy chain C-terminal fragment (Hc) used in an exemplification of
CC the present invention

PT Host cell containing recombinant expression vector encoding Clostridium
PT botulinum type B or E toxin - useful to treat humans and other animals at
PT risk of intoxication with clostridial toxin.
XX
PS Example 28; Page 277-278; 428pp; English.
XX
CC This is the DNA sequence of the Clostridium botulinum serotype A toxin C
CC fragment gene contained in plasmid pHisBotA. The encoded toxin A
CC polypeptide (see AAW68390) has a histidine-tagged N-terminal extension.
CC The vector was used to express native (i.e. non-fusion) soluble C
CC fragment in Escherichia coli host cells. The invention relates to
CC recombinant proteins derived from C. botulinum toxins. Methods are
CC provided which allow for the isolation of soluble recombinant proteins
CC free of significant endotoxin contamination. Preferred hosts for
CC production of recombinant proteins are E. coli, insect cells and yeast
CC cells. The recombinant toxins are used as immunogens for the production
CC of vaccines and antitoxins that are useful in the treatment of humans and
CC animals at risk of intoxication with clostridial toxin

PT Identifying at least one gene involved in plant resistance or response to
PT pathogenic infection for conferring resistance or tolerance to a plant to
PT bacterial, fungal or viral infection by determining or detecting plant
PT gene expression.
XX
PS Claim 27; SEQ ID NO 5263; 899pp; English.
XX
CC The present invention relates to a method (M1) for identifying genes
CC involved in plant resistance or response to pathogenic infection. M1
CC comprises identifying a gene whose expression is significantly altered in
CC the incompatible interaction of plant gene expression relative to
CC expression of the gene in an uninfected plant, in a mutant plant that
CC does not express a gene associated with response to pathogenic infection,
CC or in a corresponding incompatible or compatible interaction. (M1) is
CC useful for conferring resistance to resistance or tolerance to a plant to
CC bacterial, fungal or viral infection. The present sequence was used to
CC illustrate the invention.

RESULT 1
US-09-078-294-3
; Sequence 3, Application US/09078294
; Patent No. 6265211
; GENERAL INFORMATION:
; APPLICANT: Choo, Kong-Hong Andy
; APPLICANT: Du Sart, Desiree
; APPLICANT: Cancilla, Michael R.
; TITLE OF INVENTION: A NOVEL NUCLEIC ACID MOLECULE
; FILE REFERENCE: Davies Col
; CURRENT APPLICATION NUMBER: US/09/078,294
; CURRENT FILING DATE: 1998-05-13
; NUMBER OF SEQ ID NOS: 29
; SOFTWARE: PatentIn Ver. 2.0
; SEQ ID NO 3
; LENGTH: 80595
; TYPE: DNA
; ORGANISM: Nucleotide sequence of HC-contig
US-09-078-294-3
